

# SAFE ZONE

The green Safe Zone is where you should place the most important elements of your design so they show up on the finished product.

The safe zone is offset from the center of the template due to stitched opening for a flag pole/stand.

The red Bleed Area will likely not show on the final print, but you should fill the bleed area with artwork/color/texture if you want the entire flag printed on. The base color of the flag is white. If you do not cover the entire template with artwork or use a design with transparency, the blank or transparent portions will be white on the finished product.

The black dotted line represents the stitch line of the flag pole/stand opening. The product is stitched prior to printing, so this stitch line may be different from flag to flag - Keep this in mind when designing and try to follow the safe zone as much as possible.
